

Day 27 - Java and Spring Boot

@RequestParam

- Extracts value from query parameters
- Use key-value pair in the query strings
- Binds to parameters in the request
- Can be optional

@PathVariable

- Extracts value from URI path
- Use value for dynamic path segments
- Binds directly to the URL template
- Required by default

when to Use

- Fetching resources by ID \Rightarrow @PathVariable
- Filtering or optional param \Rightarrow @RequestParam
