Lecture 02 - Java and Spring Boot

what is Spring?

→ It is a popular Java framework for building enterprise web applications.

→ It provides lot of classes, interfaces & annotations to create the application

what is Spring Boot?

→ It is a tool to create Spring based applications faster and easier

→ It is built on top of Spring

→ It acts as a wrapper to the Spring & provides lot of benifits to the developer

problem with Spring

→ Building web application with Spring alone is very difficult

Benifits of Spring Boot

→ It provides Spring initializer to create Spring Boot starter project

→ It provides starter dependencies

* Web
* Thymeleaf
* Validation
* Spring Security

→ It provides embedded Tomcat Server
