# Day 20 - Java and Spring Boot
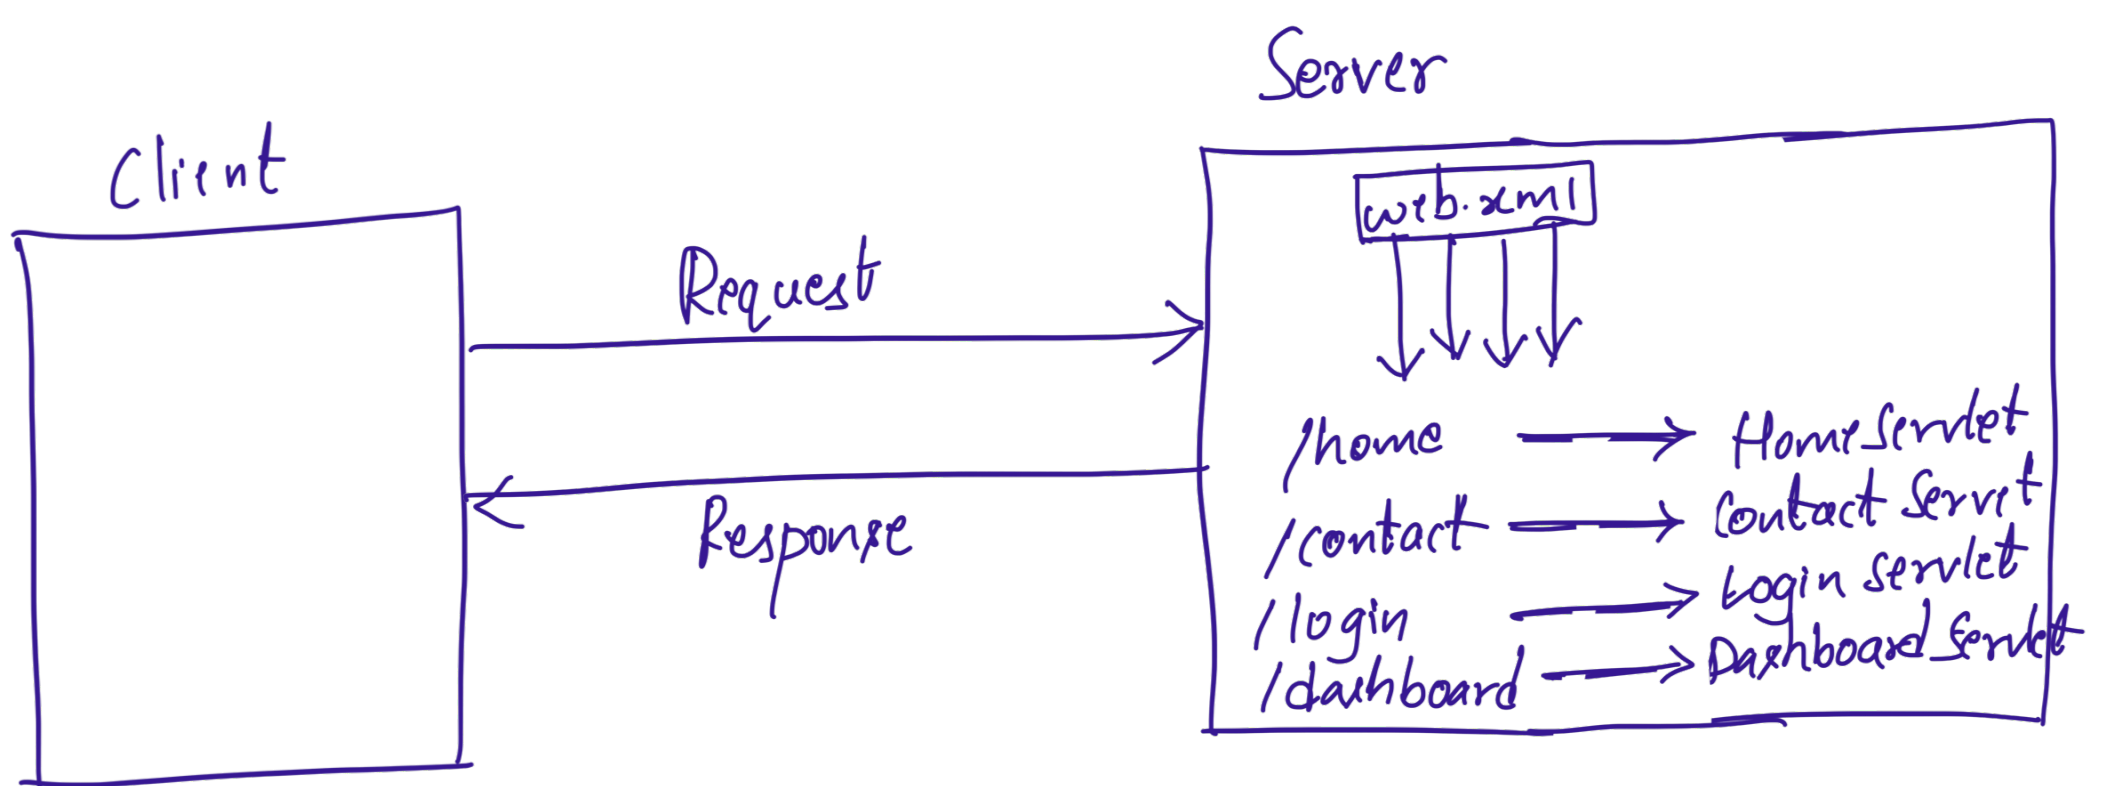

Introduction to Web Application
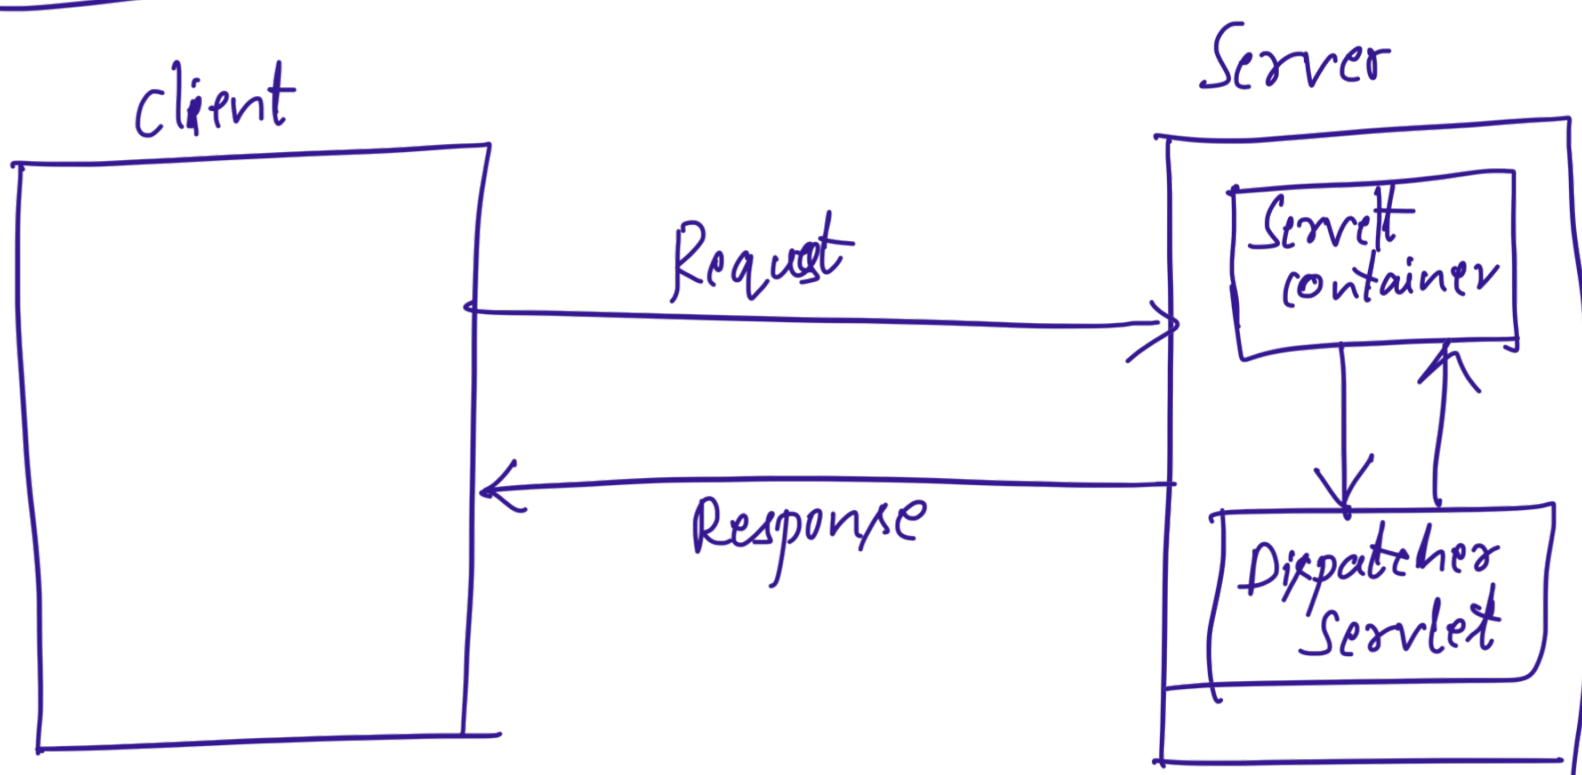

Web Application:

- It is a software product deployed into a web server

- It can be easily accessible from internet.

- Any client application can access the web application

- Web server contains frontend, backed or both

Role of Servlet Container

Role of Servlet container in Spring

What Apps we can Build Using Spring

→ Fully Fledged Web applications
    (Frontend + Backend)

→ Production grade APIs
    (Backend only)
