Day 15 - Java and Spring Boot

```
          ┌─────────────┐
          │ @ Component │
          └─────────────┘
         ↙        ↓        ↘
┌──────────────┐ ┌──────────┐ ┌───────────────┐
│ @ Controller │ │ @Service │ │ @ Repository  │
└──────────────┘ └──────────┘ └───────────────┘
```
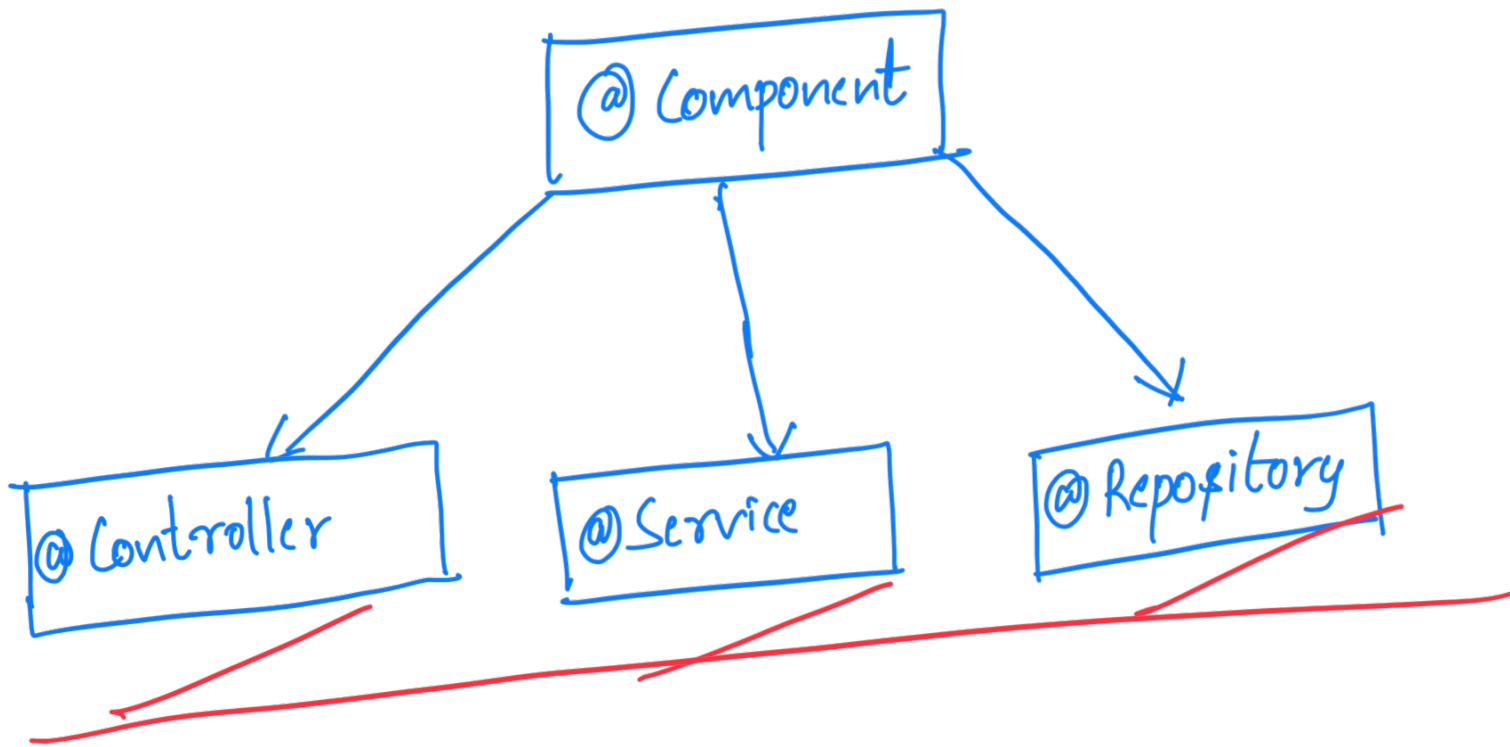

@ Bean   ## @ Component

→ Creates any number of   → Creates only one object of
  objects of same type   same type

→ Using new keyword   ⇒ framework will create w/o
                                new keyword

→ We can create beans   → we can create only developer
  for the library classes   created classes
  as well

→ More code   → less code

→ Developer will have full   → Framework will have more
  control   control
